

WHAT'S IN X20™?

Xooma's organic mineral complex (X20) is derived from a pristine ocean source near the Okinawa Islands and is harvested in its natural form. We do not add anything to the product with exception of the L-ascorbic acid and trace silver. Everything else is as it occurs in nature. Our patented processing method for this product is simply used to ensure purity and safety before it is placed into the individual X20 sachets.

In our routine laboratory tests of each batch of product, we obtain a mineral analysis to confirm product quality. This same analysis also reveals the 70+ trace minerals, which are present and naturally occurring in the product.

NOTE: Calcium and Magnesium make up a significant portion of each 1-gram sachet of X20. The remaining amount in the sachet is made up of small or trace amounts of the minerals listed to the right.

X20 MINERAL ANALYSIS

Aluminum	Neodymium
Antimony	Nickel
Barium	Niobium
Beryllium	Osmium
Bismuth	Palladium
Boron	Phosphorus
Bromine	Platinum
Cadmium	Potassium
Calcium	Praseodymium
Carbon	Rhenium
Cerium	Rhodium
Cesium	Rubidium
Chloride	Ruthenium
Chromium	Samarium
Cobalt	Scandium
Copper	Selenium
Dysprosium	Silicon
Erbium	Silver
Europium	Sodium
Fluoride	Strontium
Gadolinium	Sulfur
Gallium	Tantalum
Germanium	Tellurium
Gold	Terbium
Hafnium	Thallium
Holmium	Thorium
Indium	Thulium
Iodine	Tin
Iridium	Titanium
Iron	Tungsten
Lanthanum	Vanadium
Lithium	Ytterbium
Lutetium	Yttrium
Magnesium	Zinc
Manganese	Zirconium
Molybdenum	

Frequently Asked Questions About X2O™

How many X2O sachets are there in each individual foil pouch?

Each foil pouch contains six (6) 1-gram sachets.

How many foil pouches should I receive with a 30-sachet supply of X2O?

Since each foil pouch contains six sachets, you'll receive a total of 5 foil pouches in every 30-sachet order.

Are there any "side effects" associated with using X2O?

It depends. Based on your level of health, you may notice some detoxification symptoms such as loose bowels, temporary skin blemishes or mild headache. This is simply your body's way of flushing out toxins and replenishing itself with the healthy nutrients it needs and longs for.

"Detoxification symptoms" are typically short term if they appear at all. Positive "side effects" may include better sleep, more energy, and improved joint mobility and weight loss.

How may X2O sachets should I use per day?

It depends on your health goals. If you're looking for optimal health benefits, we suggest using three sachets per day – one sachet in a bottle of purified water in the morning and another sachet in late afternoon and one in the early evening.

"Minimum usage" is defined as one sachet per day, and many people report great results using two sachets per day. For best results, do not combine a used sachet with a fresh sachet in the same bottle of water.

(For a more complete and intense regimen, please refer to Dr. Triglia's 2-page guide "Xtreme Liquid for Xtreme Health" which can be downloaded from <https://www.xoomaworldwide.com/content/pdfs/X-liquid.pdf>)

What type of material is used to make the X2O water bottle?

The X2O bottle is made from a unique BPA-Free and BPS-Free resin which is certified for safety when beverages are consumed from it. It will not retain odor or taste, and has a wide mouth for easy filling and cleaning.

Can pets benefit from using X2O?

Many people have reported fantastic results with their pets while using X2O. While no negatives accounts have been reported, we recommend that you consult your pet's healthcare specialist if you are concerned about adding X2O to your pet's water. For safety reasons, please do not leave the X2O sachet floating in your pet's water dish. Mix the X2O sachet with your pet's water ahead of time.

Do regular over-the-counter calcium tablets/capsules have the same positive effects as X2O?

No. Conventional over-the-counter tablets/capsules must first enter your stomach, then small intestines in order to be digested properly. Depending on the quality and manufacturing process common calcium tablets/capsules may not break down effectively in your body. On the contrary, X2O becomes ionic when added to water. As an ionic solution, it is absorbed in your cells quickly, hydrating your body while delivering vital nutrients.

Do I tear open the X2O sachet or just float it in water?

Your X2O sachets are designed to float in your bottle or glass just like a tea bag. The vital minerals and nutrients in X2O will flow out of the sachet and transform your water (or other non-carbonated beverage) within 5-10 minutes.

Can I use X2O if I'm taking medication?

We recommend that you consult your trusted health practitioner if you are concerned about possible interactions with medication. However, we have had no reports of any interactions. In fact, some people have reported improved results with their medication while using X2O.

Is there an age restriction for using X2O?

No. We've received positive testimonials from people of all ages and all walks of life. These testimonials include parents of young children as well as seniors.

What type of beverage is best to use with X2O?

For best results, we recommend using one X2O sachet in 18-24 ounces of purified water (distilled, reverse osmosis, etc.). Chilled or room temperature water will provide the best taste.
